FyreGuard™ Grease Duct Addresses Fire Safety Concerns

Bettendorf, Iowa (January 31, 2011) -- Schebler Chimney Systems' FyreGuard™ grease duct offers important advantages for food service fire safety concerns. This UL 2221 Classified product has been tested for zero-clearance to combustibles and 2-hour fire rated eliminating the need for a fire-rated chase.

FyreGuard™ grease ducts are prefabricated, eliminating the need for field welding of joints. All sections assemble with "V" bands and sealant for ease of installation. Factory provided design and CAD drawings also speed the installation process and help reduce costs. Fyreguard is UL 2221 Classified offering safety advantages over field fabricated ducts, which are not rigorously tested to UL standards.

Special fittings are available for connecting automatic cleaning and fire suppression equipment directly to the chimney system.

All Schebler prefabricated models are available for shipping within two weeks, considerable faster than the industry standard. Product gets to the job site quicker which eliminates costly work stoppages.

For more information, call (800) 391-0009 or visit www.scheblerchimney.com.
