Schebler Chimney Systems Acquires Draft Induction Fan Line

Company can now provide complete ventilation systems

Bettendorf, Iowa (January 31, 2011) – Schebler Chimney Systems has acquired the Wing Draft Induction Fan line from Tutco Inc. of Cookeville, TN. The addition of draft induction capabilities for boilers and hot water appliances complements Schebler's extensive line of UL-listed, prefabricated chimney and grease duct systems.

"This fan allows us to provide design alternatives which give greater flexibility to our customers," said Mike Mommsen, National Sales Manager for Schebler. "It's a great option for complex and challenging applications when we are unable to obtain adequate natural draft."

WingFan draft inducers are a part of a complete Engineered Venting Solution from Schebler and help to reduce stack size requirements opening the way to design alternatives and better use of productive space.
